-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **DETAILED ACTION**

Applicant's election without traverse of Group I, claims 1-4 in the reply filed on 10-3-2005 is acknowledged.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 11-263062.

The '062 patent teaches the printing method for printing an optically readable dot code on a printing medium by means of printing plates as claimed including a first step of printing the code on the printing medium, using a first printing plate K2 and a first black ink; and a second step of forming a code coat covering the code on said printing medium by printing, using a second printing plate Y and a second yellow ink having a property of not affecting the operation of reading said code. See the abstract of the '062 patent, and pages 5-8 and Fig. 7 prior art discussion in the present specification for details. Regarding claim 2, the first black ink in the '062 patent has a property of absorbing light irradiating said code and coming from a lighting section of a reading device for optically reading said code; and the second yellow ink has a property of reflecting light coming from said lighting section as recited. Regarding claim 3, the '062 patent teaches to use black ink as the first ink and yellow ink as the second ink as recited. With respect to claim 4, the '062 patent teaches to print yellow ink on the dot code printed by the black ink K2 so as not to affect the operation of reading the dot code. Thus, it flows naturally

Art Unit: 2854

that the yellow ink must have a property of being transparent relative to visible light coming from the reading device.
